## 1. google

Student: Monisha | Course: CSE | Batch: 2023  
Role: Fullstack developer | Outcome: Selected  
Package: ₹19.93 LPA

### Process Details:

Drive Mode: On-Campus

Eligibility: Learning coding and aptitude is very important for students who prepare for placements. Coding helps us to solve problems logically using a computer program, while aptitude improves our mathematical and reasoning skills. Practicing simple coding problems like palindrome, factorial, and Fibonacci makes our basics strong. Aptitude questions on percentages, profit and loss, time and work, and logical reasoning improve our speed and accuracy. By practicing both coding and aptitude daily, we can build confidence and perform well in exams and interviews.

### Assessment Details:

Platform: Leetcode

Sections: Coding

Questions: 10 | Duration: 2hrs

Topics/Questions:

Learning coding and aptitude is very important for students who prepare for placements. Coding helps us to solve problems logically using a computer program, while aptitude improves our mathematical and reasoning skills. Practicing simple coding problems like palindrome, factorial, and Fibonacci makes our basics strong. Aptitude questions on percentages, profit and loss, time and work, and logical reasoning improve our speed and accuracy. By practicing both coding and aptitude daily, we can build confidence and perform well in exams and interviews.

### Interview Experience:

Technical Questions:

Learning coding and aptitude is very important for students who prepare for placements. Coding helps us to solve problems logically using a computer program, while aptitude improves our mathematical and reasoning skills. Practicing simple coding problems like palindrome, factorial, and Fibonacci makes our basics strong. Aptitude questions on percentages, profit and loss, time and work, and logical reasoning improve our speed and accuracy. By practicing both coding and aptitude daily, we can build confidence and perform well in exams and interviews.

HR Questions:

Learning coding and aptitude is very important for students who prepare for placements. Coding helps us to solve problems logically using a computer program, while aptitude improves our mathematical and reasoning skills. Practicing simple coding problems like palindrome, factorial, and Fibonacci makes our basics strong. Aptitude questions on percentages, profit and loss, time and work, and logical reasoning improve our speed and accuracy. By practicing both coding and aptitude daily, we can build confidence and perform well in exams and interviews.

### Tips for Future Students:

Learning coding and aptitude is very important for students who prepare for placements. Coding helps us to solve problems logically using a computer program, while aptitude improves our mathematical and reasoning skills. Practicing simple coding problems like palindrome, factorial, and Fibonacci makes our basics strong. Aptitude questions on percentages, profit and loss, time and work, and logical reasoning improve our speed and accuracy. By practicing both coding and aptitude daily, we can build confidence and perform well in exams and interviews.

### Company Expectations:

Learning coding and aptitude is very important for students who prepare for placements. Coding helps us to solve problems logically using a computer program, while aptitude improves our mathematical and reasoning skills. Practicing simple coding problems like palindrome, factorial, and Fibonacci makes our basics strong. Aptitude questions on percentages, profit and loss, time and work, and logical reasoning improve our speed and accuracy.

By practicing both coding and aptitude daily, we can build confidence and perform well in exams and interviews.
